# NOUR EMIL

Backend & Full-Stack Developer
Cairo, Egypt | +20 120 448 1994 | nooremeel1@gmail.com
linkedin.com/in/nour-emil | github.com/nooremeel

## SUMMARY

Backend-focused full-stack developer (Node.js, TypeScript, React, PostgreSQL, MongoDB) with two deployed applications and 250+ automated tests. Built a multi-vendor e-commerce platform with payment-gateway integration and an AI-powered app with hardened security and CI. Currently an AI data trainer at Outlier (top ~5% of contributors). Seeking a junior backend or full-stack role.

## TECHNICAL SKILLS

**Languages:** JavaScript (ES6+), TypeScript, SQL, Python, HTML5, CSS3
**Backend:** Node.js, Express, REST APIs, GraphQL, Socket.io, JWT/session auth, ACID transactions, Paymob integration
**Frontend:** React, Vite, Tailwind CSS, TanStack Query, Leaflet
**Databases:** PostgreSQL, MongoDB (Atlas, Mongoose), SQL
**Testing & CI:** Vitest, Jest, Supertest, React Testing Library, MSW, GitHub Actions
**Security:** Helmet, CSRF protection, rate limiting, bcrypt, SSRF protection, HMAC webhook verification
**Tools & Deployment:** Docker, Docker Compose, Git, GitHub, Postman, Vercel, Render, Neon, MongoDB Atlas

## EXPERIENCE

**AI Data Trainer & Quality Assurance | Outlier (Remote)** Nov 2024 – Present

- Completed 300+ expert-level RLHF and rubric-based evaluations, rating AI responses for reasoning and accuracy.
- Selected for Outlier's Oracle program (top ~5% of contributors) for consistent evaluation and QA quality.

## PROJECTS

**Atelier Market: Multi-Vendor Artisanal Marketplace** Jul 2026 – Sep 2026

Live: atelier-market-liard.vercel.app | Code: github.com/nooremeel/Atelier-Market

*Node.js, Express 5, React 18, TypeScript, MongoDB, TanStack Query, Tailwind CSS, Vitest*

- Built a full-stack marketplace with customer, seller, and admin roles, deployed on Vercel.
- Integrated the Paymob payment gateway (test mode, no real charges) with 3-D Secure, constant-time HMAC-SHA512 webhook verification, and a reconciliation fallback so orders are confirmed even when the customer never returns to the site.
- Validated stock at cart and checkout and decremented inventory with atomic updates. Designed multi-SKU product variants with compare-at pricing.
- Delivered 4-stage order tracking, streamed PDF invoices (PDFKit), an admin analytics dashboard (GMV, orders, top studios), and English/Arabic support with RTL layout.
- Wrote 258 automated tests: 85 backend integration tests (Vitest, Supertest, in-memory MongoDB) and 173 frontend tests (Vitest, React Testing Library, MSW).

**Gistly: AI-Powered Bookmark Manager** Aug 2026 – Sep 2026

Live: gistly-frontend.vercel.app | Code: github.com/nooremeel/GISTLY

*Node.js, Express 5, React 18, TypeScript, MongoDB, Google Gemini, Jest, Vitest, GitHub Actions*

- Built a bookmark manager that fetches web pages and YouTube transcripts and uses Google Gemini to generate summaries and tags. Every external call has a timeout and fallback, so bookmarks still save when the AI is down.
- Blocked SSRF in the URL fetcher (private IPs, loopback, cloud metadata) and secured the API with httpOnly JWT cookies, bcrypt, Helmet, injection sanitization, and per-route rate limiting.
- Implemented search across titles, summaries, notes, URLs, and tags (with regex escaping to prevent ReDoS), plus collections, tag filtering, pagination, and email password reset.
- Set up a GitHub Actions pipeline that runs backend tests (Jest, Supertest, in-memory MongoDB, mocked Gemini) on Node 20 and 22, then frontend tests (Vitest, React Testing Library) and a build, on every push and pull request. Frontend and backend both deployed on Vercel.

**Atelier Market: PostgreSQL & Docker Edition** Oct 2026

Live: atelier-market-postgres-iota.vercel.app | Code: github.com/nooremeel/atelier-market-postgres

*Node.js, Express 5, PostgreSQL 16, Docker, Docker Compose, GitHub Actions, Vitest*

- Re-architected a multi-vendor marketplace data layer from MongoDB to PostgreSQL using versioned SQL migrations, Foreign Keys, and CHECK constraints.
- Engineered checkout as an ACID transaction with row-level locking and conditional updates; verified race condition safety with a 20-concurrent-buyer test suite.
- Implemented full-text catalog search via tsvector and GIN indexing with relevance ranking, replacing regex scans.
- Containerized the API using Docker; automated CI testing against real PostgreSQL service containers in GitHub Actions; deployed to Render and Neon.

## EDUCATION

**B.Sc. in Computer Science | Assiut University | GPA 3.4 / 4.0** 2020 – 2024

## LANGUAGES & CERTIFICATIONS

**Languages:** Arabic (native), English (C1, TOEFL ITP 640)
**Certifications:** McKinsey & Company Forward Program (Structured Thinking & Agile); Node.js: The Complete Guide (MVC, REST, GraphQL), Academind; Google Data Analytics Professional Certificate; Google Crash Course on Python
